Profile

Worked with a team on a project for an automotive company called Lear. We did an analysis of its current statement and we observed at every step of the process of how it handles its supply logistics. After we determined the problem statement, limitations, root cause analysis, and we came up with countermeasures for the root causes. Then we thought of a solution approach, after that we gave them our implementation plan, with the expected results which were exactly what was stated on their mission statement.
